Educational Services

StaffAlerter provides mass notification for staff, students and parents in all levels of Education

Schools and universities need to send important communications to staff, students and parents about weather issues, facility closures, security threats and changes to routines like transportation schedules.

StaffAlerter is capable of notifying groups of people via SMS text, email and phone calls. The flexibility of StaffAlerter allows for custom configurations to address the unique communications challenges that occur daily in a campus environment.

StaffAlerter can incorporate inputs from fixed and wireless PADs (Personal Alerting Device), NOAA Weather alerts, access control integration, and Web Buttons on PC's and mobile devices. StaffAlerter can activate building wide alerts via paging, desktop alerts and other audible/visual signals combine to make site wide alerting effective and immediate.

Mobile communications inside and outside the facility is supported with the SA-Communicator. Alerts, custom status messages and a panic button with geo-location features are standard.

StaffAlerter provides multiple programmable inputs and outputs designed to activate panic buttons, door access, alarm systems, time clocks, equipment such as dining hall refrigeration, boiler systems and swimming pools.

Loud areas can be supported with SA-Alert to provide audio and visual cues when standard paging solutions are not optimal.

Remote buildings can be supported with additional satellite processors (Contact Notifier) that communicate with the StaffAlerter main system. Any action input to any processor can be communicated to the other sites via the Cloud using rules designed by the customer and carried out when an event is triggered.

StaffAlerter Emergency Operation Center provides instant communication and coordination through an audio/video conference bridge for up to 50 persons located anywhere.

StaffAlerter

Designed to leverage communications and mass notification for security and normal notifications

- SMS text messaging
- Email
- Phone message
- Cell phone notification

Designed to support monitoring and control functions

- Fixed and mobile panic buttons
- Building-wide alerts via paging
- Access control
- Weather alerts
- Desktop, visual and audio alerts

Designed to work with premise and cloud based control using Wi-Fi and cellular access
