

SA Guardian

StaffAlerter SA-Alert and Personal Alerting
Providing security for Hospitality Workers

Mobile Security for Hospitality Workers

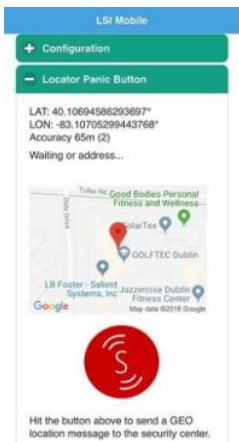

PM Power Products LLC SA Guardian™ has been developed for the hospitality market to ensure hospitality staff have the means to call for help should they find themselves in danger or requiring immediate assistance.

Comprised of the SA-Alert audio and visual alerting system and the SA-PAD (Personal Alerting Device), SA Guardian allows workers to carry out their tasks knowing help is just a press of a button away. SA-PAD (wireless) and SA-PAD-M (cellular) support 3 different messages and connects to a Wi-Fi network or cellular carrier allowing multiple persons to be notified through a button push. Alerts to security can be sent as text, SMS, or phone calls with a prerecorded announcement specific to the alerting SA-PAD or SA-PAD-M.

Multiple SA-PADs can be associated with a single SA-Alert to allow groups working in a specific area to share the SA Alert device, thus decreasing deployment costs.

The SA-Alert can be mounted on a housekeeping or other cart, and when activated, will provide a bright flashing lamp and loud piercing siren to alert nearby persons to the situation in addition to sending notifications to security. Worker safety is more than social risk, and those in the hospitality industry face environmental as well as natural health risks. SA Guardian can provide reassurance that help is only a button push away.

With StaffAlerter Communicator, the GPS location, name and cell number of the user is sent to the StaffAlerter when the Panic Button is activated. SA-Communicator can be used to push emergency alerts and instructions to individuals or groups, automatically notify key personnel, send requests to a group of recipients and allow them to respond with configurable buttons, or allow mobile users to stay connected to team members and obtain assistance when they need it.

StaffAlerter Emergency Operation Center provides instant communication and coordination through an audio/video conference bridge for up to 50 persons located anywhere.

StaffAlerter

Designed to leverage communications and mass notification for security and normal notifications

- SMS text messaging
- Email
- Phone message
- Cell phone notification

Designed to support monitoring and control functions

- Fixed and mobile panic buttons
- Building-wide alerts via paging
- Access control
- Weather alerts
- Desktop, visual and audio alerts

Designed to work with premise and cloud based control using Wi-Fi and cellular access
